Health's fight against cancer goes nuclear

GOVERNMENT INVESTS in the latest technology to assist cancer patients.

Residents of Ga-Rankuwa and surrounding areas now have access to state-of-the-art oncology unit.

The Gauteng Department of Health has pumped R36 million into a new oncology facility that will ensure that cancer patients in Ga-Rankuwa, Tshwane and surrounding areas have easier access to treatment.

"I cannot contain my excitement at the launch of

this much-needed biomedical equipment because to us, patient care and safety will always come first," said Health MEC Dr Gwen Ramokgopa.

She said the first-of-its kind PET-CT imaging system in Africa serves as testimony to the department's commitment to improving

patient care.

"The facility brings advanced oncology care to patients, with a new leading-edge oncology diagnostics facility that harnesses multiple technologies to provide high-quality data quickly," she said.

The oncology facility is fitted with new equipment

including an advanced Philips Ingenuity TF PET/CT which is a nuclear imaging technique. It evaluates the structure and function of cells and body tissue providing oncologists with a patient-specific method of treatment.

"The system has already helped guide decision making for early diagnosis and assessment of treatment efficacy for over 105 patients since its installation. We are thrilled with the results and the level of care we are able to provide to our people with this world-class technology," said Dr George Mukhari Academic Hospital's Head of Nuclear Medicine Dr Trevor Mdaka.

The Hospital serves 1,7 million people both the North West province and Limpopo provinces.

MEC Ramokgopa said the launch marked the beginning of the end to suffer

Youth put to work

THE DEPARTMENT of Public Works' bursary and artisan programme is honing skills and making dreams come true.

More Matshediso

When Bonolo Rakgalakana (18) passed grade 12 last year, she thought her dreams of becoming a mechanical engineer would have to be put on hold because her parents could not afford to pay university fees.

Rakgalakana, from Eersterust in Tshwane, thought that just like her sister she would have to join the national defence force and start fending for herself after matric. Little did she know that her hard work had already secured a bright future for her.

"My older sister passed matric very well but my parents did not have money to send her to university, so she took a gap year. She then applied and got a job at the national defence force. I thought fate had the same in store for me, but my hard work was rewarded with a bursary from the Department of Public Works," said Rakgalakana.

Rakgalakana's twin sister

Bonolo Rakgalakana is one of the top learners who received a bursary from the Department of Public Works.

Koketso, who also completed matric with flying colours in 2017, has also been awarded a bursary from the department.

The sisters were top achievers at Mamelodi Secondary School last year and received distinctions in all of their subjects.

"We did not have access to the internet, library books and good sports fields, but we attended extra morning and afternoon classes as matriculants," said Rakgalakana.

Their names were on the De-

partment of Public Works' list of about 30 deserving learners from the class of 2017 who were awarded bursaries to pursue their career dream in the built industry.

The bursary is valued at R130 000 a year, for each learner, and covers tuition, accommodation, meals, textbooks, academic resources and a monthly allowance. The department has invested R3,9 million in 2018's first-year students.

Rakgalakana has enrolled at

the University of Cape Town for a Mechanical Engineering degree.

"I have wanted to do it from when I was in Grade 10. I'm looking forward to working for the Department of Public Works, as a way of giving back to show my appreciation," she said.

The department's Chief Director for Professional Services Vangile Manzini said the bursary programme was introduced in 2014 and aims to harness scarce skills in the built industry.

So far, the department has awarded bursaries to approximately 288 deserving youth from disadvantaged communities.

The beneficiaries pursue careers in engineering (civil, structural, transport, electrical, water care, mechanical, chemical and hydrology); analytical chemistry; construction management; quantity surveying; architecture; landscape architecture; urban and regional planning; interior design; horticulture; actuarial science and property studies.

In addition to providing bursaries, the department's Artisan Development and Young Professionals Programme for learners who enrol at technical vocational education and training colleges, enables learners who obtain trade test certificates, for various trades within the construction industry, to become electricians, bricklayers, carpenters or plumbers.

Manzini said there are about 88 young professionals who have obtained professional registration since the introduction of the programme in 2007, and 53 artisans have been successfully registered since the implementation of the programme in 2015.

Beneficiaries come from schools across the country that are participating in the department's schools programme. Schools can join the programme through the district office if they are producing a pass rate above 65 per cent in maths and science, and are located in rural areas, farms or townships. □
