Vaccination programme rolls on

President Cyril Ramaphosa with Simphiwe Ntombela, who is the Production Manager at the Aspen Pharmacare sterile manufacturing facility in the Eastern Cape.

South Africa's Coronavirus Disease (COVID-19) vaccination programme is making good progress, with the second phase expected to start soon.

During a recent address to the nation, President Cyril Ramaphosa said Phase 2 of the programme is scheduled to start in mid-May, with registration expected to take place in April.

"Under Phase 2, we hope to vaccinate more of our people over six months," said the President.

In line with international best practice, in Phase 2 government will prioritise those at the highest risk of hospitalisation and death, such as people over 60 and people living with comorbidities.

"To ensure that we have supporting infrastructure over 2 000 vaccination sites have

been identified across the country.

"These include general practitioners' rooms, community clinics and pharmacies, retail outlets and in some instances, larger facilities like stadiums and conference centres," he said.

Electronic Vaccination Data System

Government has established an Electronic Vaccination Data System to manage the vaccine rollout and direct people towards vaccination sites closest to where they live.

"This system will allow you to register, receive an appointment date and site, and receive a digital certificate or a hard copy confirming your vaccination status once vaccinated.

"Everyone that will be vaccinated will have to be registered on the system first, and you will be invited to register once you become eligible," the President said.

Government will work with provincial and district structures and community-based organisations to register those citizens who do not have access to technology.

"We are developing mechanisms to identify and register
